

GeneNeighborhood

an R package to explore the direct neighbors
of your favorite gene set

Studying gene neighbors

Gene sets:

- Differentially expressed
- Bound by a specific protein
- Present in a specific chromatin context
- Involved in a specific function
- ...

Specific neighborhood ?

- Orientation (incl. overlap) ?
- Specific proximity / distance ?

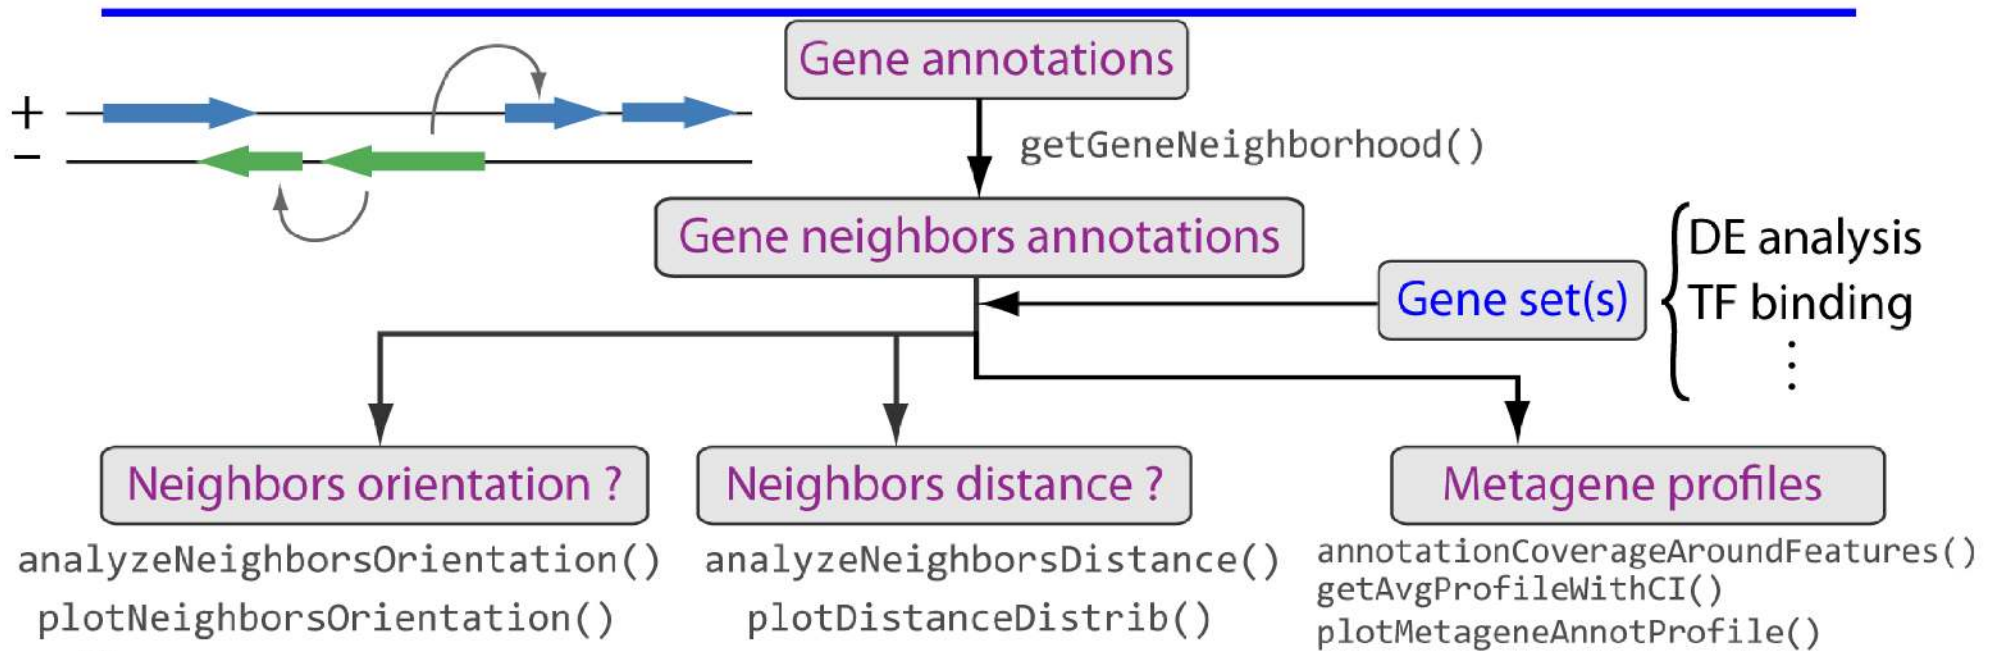

subgroups

Function / expression... of the neighbors ?

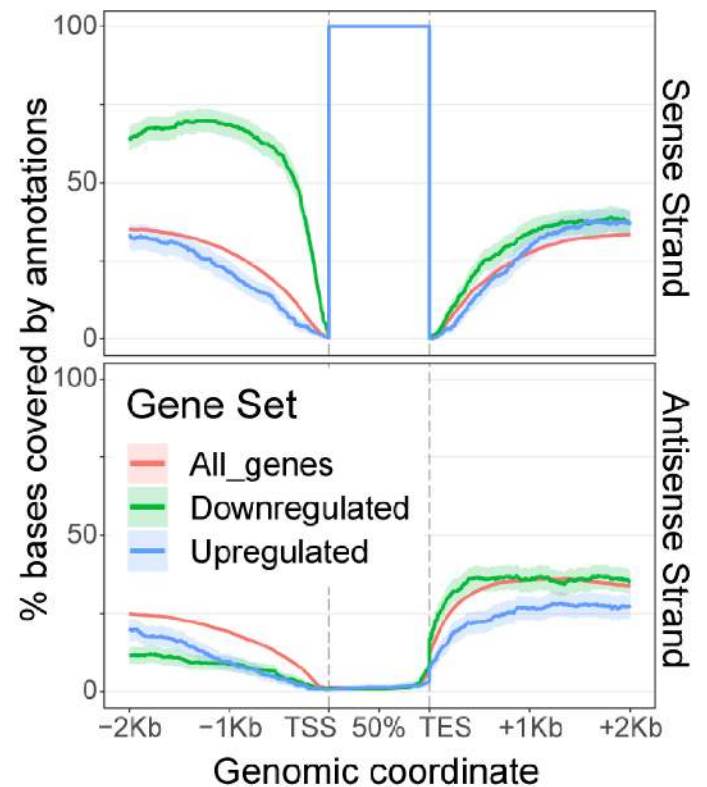

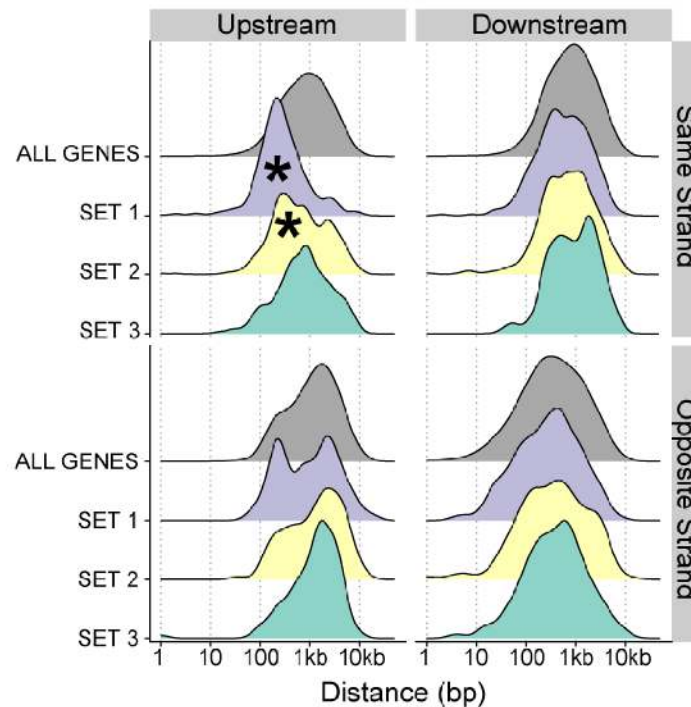

Generate hypothesis on how neighboring genes interact

Package overview

Neighbor orientation

- Same Strand
- Opposite Strand
- Other
- Opposite Overlap

Defining Neighborhoods

Gene Neighborhood

Genes not overlapping with other genes:

UpstreamClass	Upstream	Focus gene	Downstream	DownstreamClass	Neighborclass
SameStrand				SameStrand	SS
SameStrand				OppositeStrand	SO
OppositeStrand				SameStrand	OS
OppositeStrand				OppositeStrand	OO

TxDb objects
 ensemblDb
 GenomicFeatures package

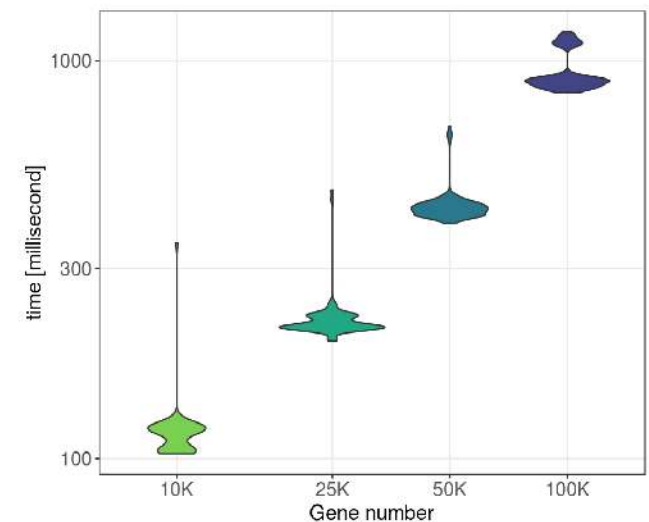

Genes overlapping with a single gene:

UpstreamClass	Upstream	Focus gene	Downstream	DownstreamClass	Neighborclass
SameOverlap				SameStrand or OppositeStrand	US / UO } U: upstream
OppositeOverlap				SameStrand or OppositeStrand	
SameStrand or OppositeStrand				SameOverlap	SD / OD } D: downstream
				OppositeOverlap	
SameStrand or OppositeStrand				SameStrand or OppositeStrand	I } I: identical (same start + same end)
				SameStrand or OppositeStrand	
SameStrand or OppositeStrand				SameStrand or OppositeStrand	H } H: host
				SameStrand or OppositeStrand	
other				other	G } G: guest
				other	

UPPER CASE: overlapping gene is on the same strand
 lower case: overlapping gene is on the opposite strand

Filter annotations
 (expressed genes,
 gene types, ...)

getGeneNeighborhood()

Genes overlapping with a >1 gene:

UpstreamClass	Upstream	Focus gene	Downstream	DownstreamClass	Neighborclass
other				other	C

or any other situation with multiple overlaps

Analyzing neighbors orientations

analyzeNeighborsOrientation()

Side	Orientation	n	Percentage	n Universe	Percentage in Universe	p.value
Upstream	SameStrand	449	75.84	17068	51.23	2,00E-35
Upstream	SameOverlap	6	1.01	96	0.29	7,00E-03
Upstream	OppositeStrand	125	21.11	15267	45.82	1,00E+00
Upstream	OppositeOverlap	4	0.68	344	1.03	9,00E-01
Downstream	SameStrand	308	52.03	17099	51.32	4,00E-01
Downstream	SameOverlap	1	0.17	111	0.33	9,00E-01
Downstream	OppositeStrand	184	31.08	12708	38.14	1,00E+00
Downstream	OppositeOverlap	91	15.37	2857	8.57	4,00E-08

plotNeighborsOrientation()

Analyzing neighbors distance

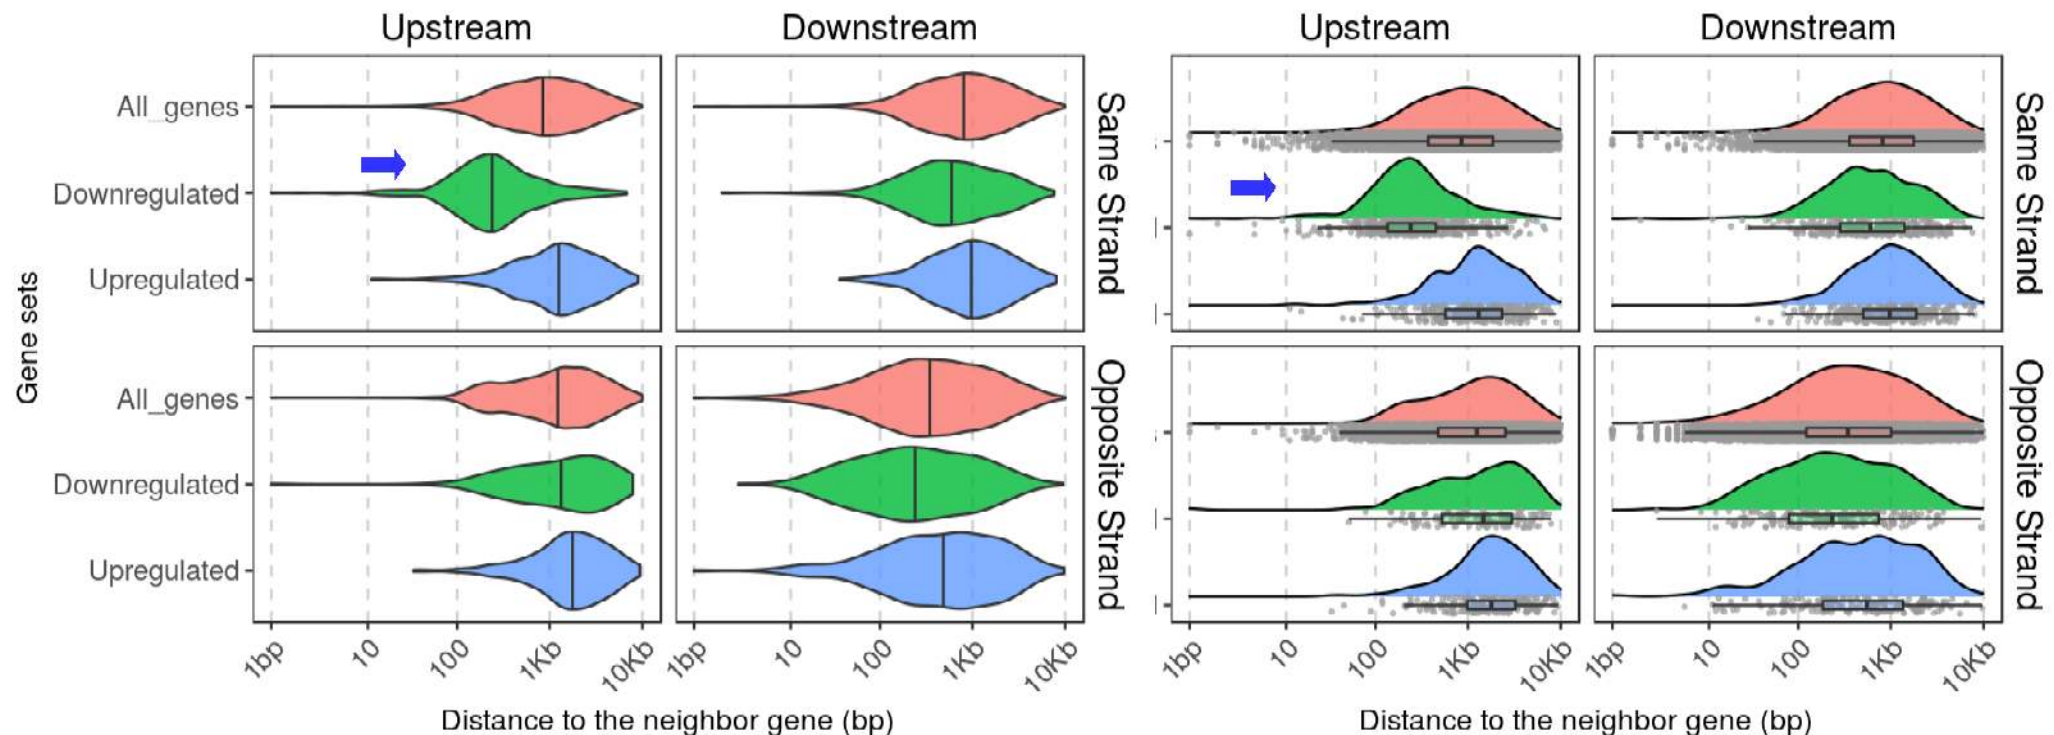

```
analyzeNeighborsDistance()
```

- Extract distances
- Descriptive statistics (mean, median, SD, 95 % CI, ...)
- Tests (KS, Mann-Whitney, permutation test of independence)

coin R package

```
plotDistanceDistrib()
```

Metagene profiles

Gene annotations:

Annotation coverage:

with usePercent = TRUE

Extract coverage around genes:

annotationCoverageAroundFeatures()

Bin gene bodies, align and combine strands:

Sense strand:

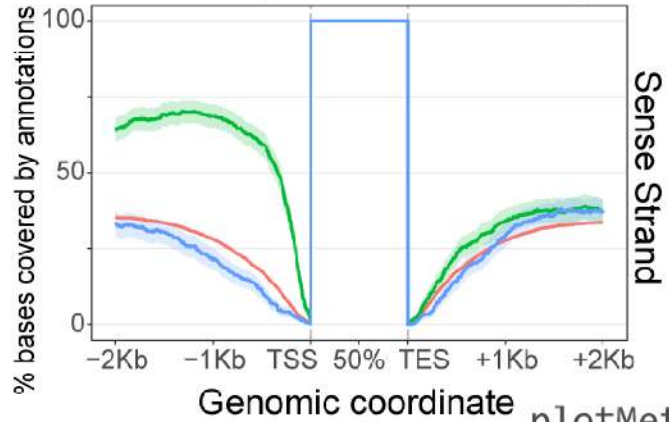

assembleProfiles()

Antisense strand:

Average profiles for different gene sets:

getAvgProfileWithCI()

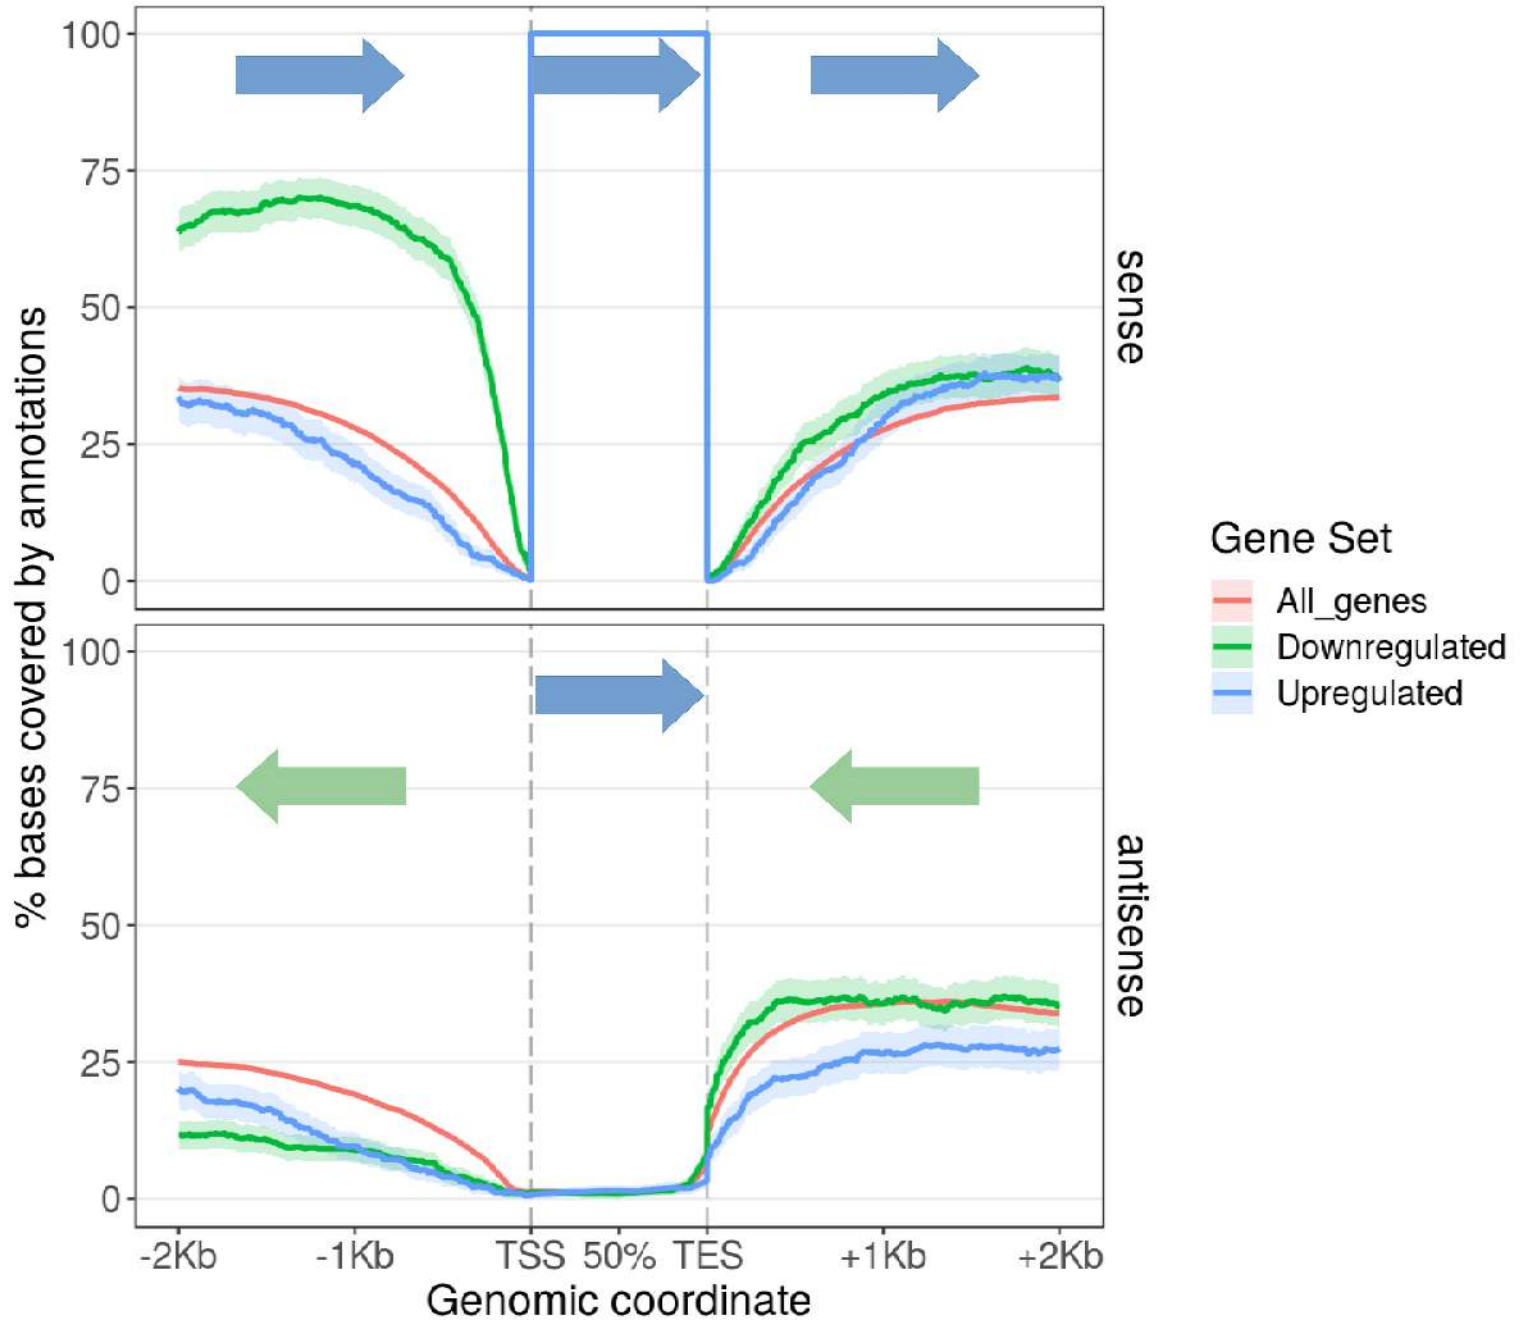

plotMetageneAnnotProfile()

Metagene profiles

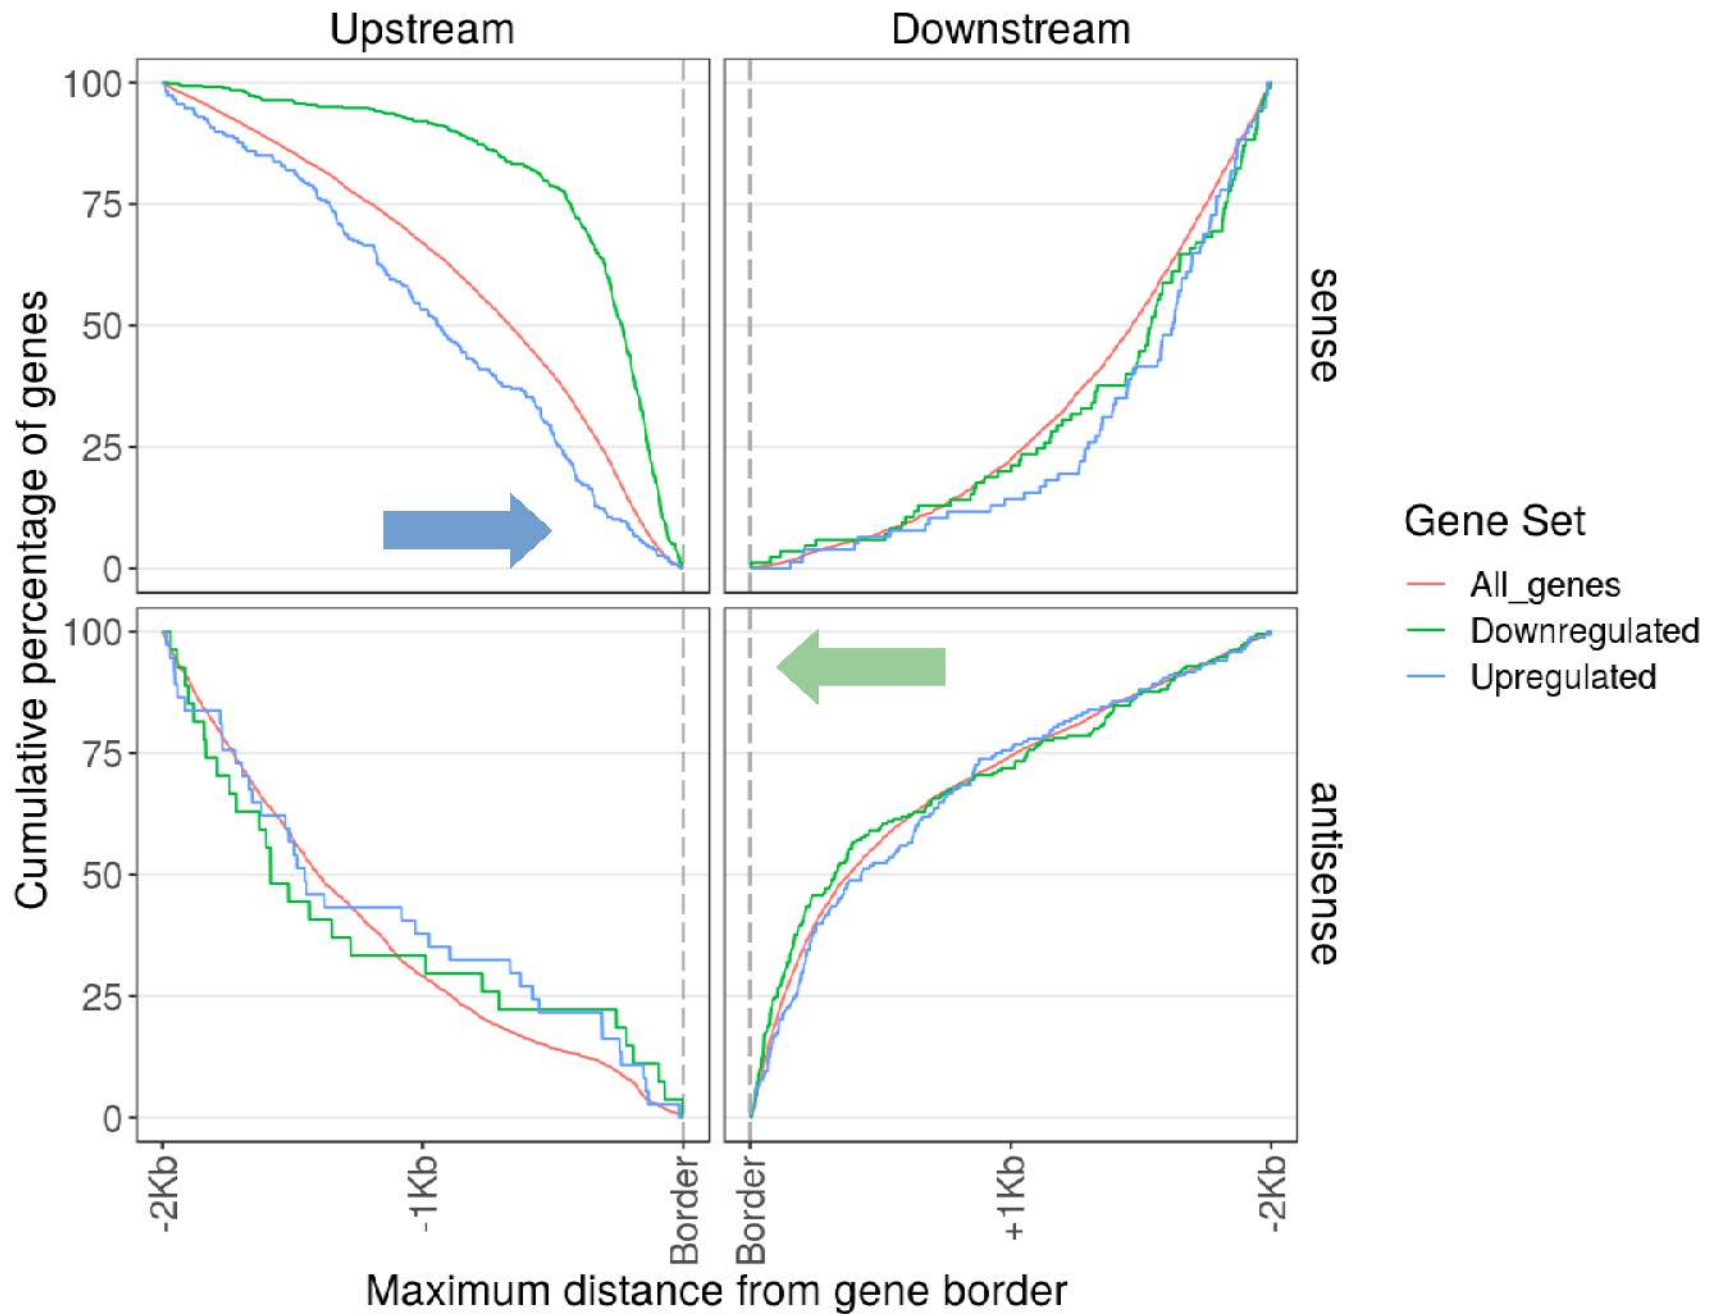

```
plotMetageneAnnotProfile()
```

Distances to single point features

`plotCumulPercentProfile()`

% of genes with a TES at less than X bp ?

Conclusion / future development

build passing

build passing

github.com/pgpmartin/GeneNeighborhood

Neighbors orientation

- Facilitate the analysis of multiple gene sets

Neighbors distance

- Split analysis into 3 tasks :
 - extract distances
 - descriptive statistics
 - inference

Metagene profiles

- Add a wrapper to simplify the pipeline

+ Case studies in vignette

Submit to CRAN or BioC

Future development

- > 1 overlap
- Deal with a quantitative variable defining gene sets
